

Mouseclick Technologies: Integration and Migration Management Software Development Infrastructure And Security

Mouseclick Technologies

Our offer is focused on enterprise IT and software development as a service. We pursue holistic approach to problem solution, which means that every problem is analysed end-to-end, and the optimal we offer solution may spread across multiple systems. We analyse human workflows as well as software and infrastructure. We perceive Information Technology as an extension of human capacity and human processes. We follow innovators and trendsetters, in order to help our clients embracing the challenges of rapidly evolving technology standards.

Cloud and Hybrid Services

Globalisation of the Information has become the main factor shaping contemporary business models. Being dependent on technology, this deep change has become one of the main driving factors of the current technology development. We help businesses to modernise infrastructures, to implement private and public clouds, based on leading industry trends.

DevOps As A Service

Intranet vs extranet, private vs public cloud, transparency vs security, every solution has its right to exist. We can offer a versatile solution to any challenge, while prioritising pragmatic approach with focus on the total cost of ownership of the chosen solution. We prefer affordable, realistic and future compatible solutions. It is our mission to live on the edge of the emerging technologies, to keep up with the innovation, but minimise the costs of adoption, and therefore always deliver the best value for the money.

We are independent, vendor neutral, and purpose oriented. We offer pragmatic solutions that will best serve our client's needs. We are efficient and innovative, and we are happy to share our technology success with our clients.

Our Services

We specialise in fine tuning infrastructure solutions. We understand that security and privacy concerns are today the most burning issues in the network of the IT priorities. We assist in all phases of design, implementation, deployment, and migration of enterprise solutions. We use holistic approach to the business systems, to ensure efficiency and completeness of the enterprise IT processes.

Gap Analysis and Infrastructure Audit

We offer independent solution audit for your current infrastructure, or for a blueprint of a future implementation. We can suggest alternative solutions and highlight risks related to the specific choice of technologies.

Mouseclick Technologies: Integration and Migration Management Software Development Infrastructure And Security

Enterprise Helpline

We offer crisis analysis services for critical “unresolvable” issues.

Helpline e-mail: help@mouseclicktechnologies.com

Business case: National Bank of XYZ has deployed new systems, investing in a large scale infrastructure upgrade. This project was executed by four technical departments: ITS, OPS, Network OPS, and Development. After the upgrade, core proprietary components delivered by Development, were deployed in production, but with a critical deficiency: core financial software was not able to start reliably. It would fail unpredictably, 19 out of 20 times, sometimes 59 out of 60 times in a row. After 6 months of dealing with the problem internally, the Bank invited Mouseclick Technologies to analyse the problem. The problem was solved and eliminated in 3 hours, by a simple configuration change on the firewall, and the deficiency was reported to the firewall vendor. We do not re-delegate the responsibilities, we actually solve problems.

Integration and Migration Management

We offer implementation, migration, and integration management services.

Business case: Company A is buying a New SuperSolution from Company B. This new solution will replace existing LegacySolution, which is generally outdated, but is tightly integrated with Proprietary UltimateDataBroker system, which is developed in-house, and needs to be integrated with the New SuperSolution. Migration will take six months, and it will be mostly done by the New SuperSolution provider, who is not familiar neither with LegacySolution, nor with UltimateDataBroker, nor with the structure of the Ultimate Data being core of the Company A business.

We offer our service to company A to evaluate the approach of Company B to the implementation phase (independent audit); we analyse the external project dependencies (gap analysis), we synchronise internal and external implementation workflows (implementation project management), we review the old and the new data models, where necessary, and cater for necessary data migration effort (data migration). Acting as an independent 3d party, we offer technology audit and systems design review for all parties involved.

Software development

We offer development of enterprise software, including workflow optimisation, high availability, integration, sign on, security, and infrastructure optimisation.

Business case: Company A is a data vendor, and Excel is the primary analytic tool for data consumption of this proprietary data. Legacy Solution was dependent on Microsoft technology which has been deprecated. Company A invited Mouseclick Technologies to offer a solution replacing the former one. Based on the analysis of the proprietary data stream, and explicit user requirements, we delivered client-server solution, built mostly on open source technologies, and integrated with Excel plugin written in .NET, to provide future compatibility and performance boost to the client financial data distribution model. Our solution provided an automated workbook conversion agent which facilitated migration of the user worksheets to the new to the new data model.

**“Mouseclick Technologies” offers you migration and integration services,
infrastructure consulting and custom software development.**
